Linden Hutchinson

Software Engineer, Backend & AI

Melbourne | hutchinson.linden@gmail.com | 0459 113 757 | LinkedIn | GitHub

Professional Experience

Software Engineer
April 2026 - October 2026

Quarterzip AI | Melbourne

- Designed and delivered an enterprise onboarding feature that books employees into sessions on their own calendars, built to onboard rosters of 10,000+ without manual scheduling.
- Solely built an MCP server with OAuth 2.1, giving stakeholders secure access to product data from AI assistants.
- Created a customer-facing AI analyst that answers questions about call data with cited evidence, replacing manual reporting across 10,000+ queries.
- Developed a post-call analysis pipeline that shows customers where users get stuck and why, and turns those insights directly into improvements.

Software Engineer
May 2025 - April 2026

Sidekicker | Melbourne

- Cut execution time of a key SQL query by 96% through query and index optimisation.
- Owned features end to end across the API and web apps, working with stakeholders from requirements through release.
- Ran security audits that found and fixed SQL injection and XSS vulnerabilities, protecting user data.
- Improved monitoring and test coverage, so performance problems were caught earlier and releases shipped with more confidence.

Senior Software Developer
March 2023 - May 2025

Tesserent - Cyber Solutions by Thales | Melbourne

- Co-authored a report on the commercial viability of open-source LLMs, leading the evaluation that benchmarked capability across model families and sizes.
- Architected a greenfield internal application integrating multiple APIs, built to meet high-security requirements.
- Resolved an issue in a legacy application that had persisted for 6 months, saving the team 30 minutes of manual work per day.
- Led code reviews and mentored developers on security and coding standards.

Software Developer

January 2019 - March 2023

Hutchinson Software | Melbourne

- Stabilised a legacy system by tracing and fixing long-standing reliability issues.
- Built a bespoke platform that took a meat-judging competition off paper, letting organisers upload contestants and judges enter scores online, with results calculated automatically.
- Built customisable dashboards that let council staff see the state of sewerage and water treatment indicators at a glance.
- Optimised SQL queries over multi-million-row datasets, keeping the application responsive as data grew.

Technical Skills

Languages:	Python, TypeScript, JavaScript, SQL, PHP, C#
Frameworks & APIs:	FastAPI, Django, Django Ninja, Flask, Laravel, Svelte, React, Vue, HTMX, GraphQL, REST, WebSockets, WebRTC
AI & LLMs:	Real-time Voice Agents, AI Agents & Tool Calling, MCP, Prompt Engineering, LLM Evaluation, Agentic Coding
Tools & Infrastructure:	Docker, AWS, Firebase, PostgreSQL, Redis, Dramatiq, OAuth 2.1, GitHub Actions, GitLab CI, Pytest, Playwright, Sentry, Grafana, New Relic, PostHog

Education

Bachelor of Artificial Intelligence

2019 - 2022

Deakin University | Grade: Distinction

Projects

Real-Time Multiplayer Game

2025

outlier-game.com

A real-time multiplayer social deduction game with a typed Python API and low-latency WebSocket communication, deployed with Docker on a DigitalOcean droplet.

Technologies: Python, Django, Django Ninja, Channels, Redis, TypeScript, Alpine.js, Docker

Self-Hosted AI Agent

2026

An AI agent that runs a home media server. It recommends titles through chat, monitors every service and summarises what's happening in plain language, and fixes stalled downloads on its own within a set of safe tool calls.

Technologies: Python, Flask, Svelte, LLM Tool Calling, Docker
