Professional Experience

Software Engineer

April 2026 - Present

Quarterzip AI | Melbourne

- Designed and solely built an MCP server and AI chatbot giving stakeholders and customers natural-language access to product data; has served 10,000+ queries that previously required manual work, saving stakeholders hours on reporting and data extraction.
- Implemented a full OAuth 2.0 authorisation flow for the MCP server, with PKCE and JWKS-based token verification, enabling secure native integration with Claude.
- Owned the architecture and delivery of Google Calendar and Microsoft 365 integrations powering a new activation channel, issuing 10,000+ invites that bring users into onboarding sessions with the voice assistant.
- Reduced voice call latency, tuned assistant prompts, and built an idempotent, monotonic event ledger so each call event is recorded exactly once and in order.
- Built an AI-assisted development workflow, orchestrating parallel Claude Code agents as architect and reviewer to deliver multiple workstreams concurrently.

Software Engineer

May 2025 - April 2026

Sidekicker | Melbourne

- Cut execution time of a key SQL query by 96% through query and index optimisation.
- Delivered features across the GraphQL API and React applications, owning work end-to-end from requirements through release.
- Conducted a security audit of the codebase, identifying and remediating SQL injection and XSS vulnerabilities to safeguard user data.
- Improved observability with New Relic, Sentry, and Grafana, enabling proactive detection of performance bottlenecks.

Senior Software Developer

March 2023 - May 2025

Tesseract - Cyber Solutions by Thales | Melbourne

- Co-authored a report on the commercial viability of open-source LLMs; led the evaluation workstream, designing standard and novel benchmarks to compare capability across model families and sizes.
- Architected an internal greenfield React application with complex multi-API integrations and high-security requirements.
- Led code reviews and mentored developers on security best practices and coding standards.
- Resolved critical bugs in a legacy Django application, including a hidden issue that had persisted for 6 months, saving the team 30 minutes of manual workarounds per day.

Software Developer

January 2019 - March 2023

Hutchinson Software | Melbourne

- Stabilised a legacy PHP system by diagnosing and resolving long-standing core reliability issues.
- Built a bespoke Laravel application for event management, automating manual workflows.
- Engineered a Vue.js data dashboard backed by a PHP REST API, with test coverage in PHPUnit and Playwright.
- Optimised complex SQL queries over multi-million-row datasets to maintain application performance.

Technical Skills

Languages:	Python, PHP, SQL, TypeScript, JavaScript
Frameworks & APIs:	FastAPI, Django, Django Ninja, Laravel, Kohana, Svelte, React, Vue, HTMX, GraphQL, REST
AI & LLMs:	Real-time Voice Agents, MCP, Prompt Engineering, LLM Evaluation, Agentic Coding (Claude Code)
Tools & Infrastructure:	Docker, AWS, Firebase, Redis, OAuth 2.0, CI/CD (GitHub Actions/GitLab), Pytest, PHPUnit, Playwright, New Relic, Sentry, Grafana, Git

Education

Bachelor of Artificial Intelligence

2019 - 2022

Deakin University | Grade: Distinction

Projects

Real-Time Multiplayer Game

2025

A real-time social deduction game on a modern Python backend. Built with Django Ninja for typed REST APIs and Django Channels/Redis for low-latency communication, with a decoupled Alpine.js frontend, containerised with Docker.

Technologies: Python, Django, Django Ninja, Channels, Redis, TypeScript, Alpine.js, Docker

AFL Data Analysis

2024

A data engineering and analysis platform for the Australian Football League. Automated scrapers collect match scores (1897-present), player statistics, and historical betting odds, feeding Python cleaning pipelines and Jupyter notebooks for statistical modelling.

Technologies: Python, Pandas, SciPy, BeautifulSoup, Jupyter
